

Tape the stencil to the wall using scotch tape

1. Place the stencil on the wall
2. Level it with bubble leveler
3. Place the Blaze Art to make sure its leveled and looks good
4. Tape the stencil, so you have the outline where the drills should be.
5. At least 2 pieces need to be drilled and hooked for stability.
Choose which ones you want to hang, and drill the corresponding holes.
(Note that the side art's drill are close to the edge because of the paper size. If you choose those as the ones to hang, please drill where the center of the circle would be, which is close to the edge of the paper)
7. Remove the stencil after drilling, and attach the flush mount & hang the selected 2 (or more) art.
6. After attaching the remaining ones using Magnetic Modular System, please check for stability. For larger collages, its recommended to hook more than 2 pieces for safety.

With the stencil on the wall and place the Art on the stencil to make sure its leveled and looks good on the wall.
